What's inside

Design system — Every token is in :root. No hardcoded colors anywhere in the HTML. Swap --accent: #4f7cff once and the entire app recolors. Same for spacing (--s1 through --s7) and radius.

Typography hierarchy does all the heavy lifting — 11px labels → 12px secondary → 13px body/table → 14px section titles → 20px KPIs → 24px page titles. JetBrains Mono only for currency and numbers, never for labels.

Border-based layout — Every card boundary, section separator, and table row uses 1px solid rgba(255,255,255,0.06). No shadows anywhere.

Pages & their data contracts

Page	Primary endpoint
Dashboard	GET /api/summary?period=1m
Transactions	GET /api/transactions?page=1&limit=50&category=&dept=
Upload	POST /api/expenses/upload (multipart) → GET /api/expenses/preview/:jobId
Analytics	GET /api/analytics?period=1m&groupBy=category|dept|
Anomalies	GET /api/anomalies?status=open&severity=critical|warning|info
Subscriptions	GET /api/subscriptions?sort=lastUsed
Forecasting	GET /api/forecast?months=3
AI Insights	GET /api/insights + POST /api/chat
Budgets	GET /api/budgets/current + PUT /api/budgets/:dept
Vendors	GET /api/vendors?sort=spend
Departments	GET /api/departments
Reports	POST /api/reports/generate?type=monthly&format=pdf
Settings	GET/PUT /api/settings/profile

Next steps

The two most impactful things to build next for a hackathon demo:

1. **Real AI categorization** — wire the Upload page's "Process with AI" button to a Python FastAPI endpoint that calls Claude API with the raw CSV rows and returns category + confidence per row. The preview table is already wired for it.
2. **Anomaly detail drawer** — right now clicking an anomaly does nothing. A slide-in panel with the AI's full reasoning ("This vendor has never appeared before, the amount is 6.2× your median vendor payment, and there's no matching PO in the last 90 days") is the single most impressive thing you can show a judge.

// Period tabs on dashboard
document.querySelectorAll('.period-tab').forEach(t => {
  t.addEventListener('click', () => {
    document.querySelectorAll('.period-tab').forEach(x => x.classList.remove('active'));
    t.classList.add('active');
  });
});
</script>
</body>
</html>
```

You are continuing an existing project called CashFlow AI — a financial intelligence SaaS dashboard.

IMPORTANT:
Do NOT redesign everything from scratch.
Do NOT change the design system.
Do NOT change spacing scale, typography scale, or color tokens.
Only improve layout consistency, component structure, and UI quality.

This is an enterprise fintech dashboard, not a landing page.
The UI should look like Stripe, Ramp, Mercury, Linear, or Notion.

YOUR TASK

Improve the existing frontend by:

1. Standardizing spacing across all pages
2. Improving table design and alignment
3. Improving KPI card layout
4. Making sidebar and navbar more consistent
5. Adding a floating action menu (bottom right)
6. Using neon/glow buttons ONLY for AI actions

7. Adding a comparison table component
8. Improving typography hierarchy
9. Aligning everything to a grid layout
10. Making UI more minimal and professional
11. Reducing visual clutter
12. Ensuring consistent component styles across pages

COMPONENTS TO USE

Use and integrate these component types:
- Floating Action Menu (framer-motion)
- Neon Button (only for AI actions)
- Comparison Table
- Navbar
- Sidebar
- KPI Cards
- Data Tables
- Charts
- Insight Cards
- Drawer/Slide panel for anomaly details
- Modals for add/edit actions

DESIGN RULES

Follow these strict UI rules:
- Border-based layout instead of shadows
- Consistent spacing scale
- Consistent typography scale
- Monospace font for currency and numbers
- Use badges for status (critical, warning, info, success)
- Use grid layout for dashboard sections
- Avoid bright gradients
- Avoid large icons
- Avoid glassmorphism
- Keep UI minimal and clean
- Animations should be subtle and fast
- Maintain consistent padding inside cards
- Tables should look like financial software dashboards

PROJECT STRUCTURE

Ensure project structure is component-based:

/components/ui
/components/layout
/components/cards
/components/tables
/components/charts
/components/modals
/components/ai
/pages/dashboard
/pages/transactions
/pages/upload
/pages/analytics

/pages/anomalies
/pages/subscriptions
/pages/forecast
/pages/insights
/pages/budgets
/pages/vendors
/pages/departments
/pages/reports
/pages/settings

GOAL

The goal is to make the existing dashboard look like a real production fintech SaaS product, not an AI-generated dashboard or template.
Focus on consistency, spacing, typography, layout, and component reuse.
Do not redesign everything — improve and refine the existing UI.
